

PIERO ROSPIGLIOSI BELTRAN

SUMMARY

I am an experienced **Senior Cloud Infrastructure Engineer** with a comprehensive background in programming and a dedicated focus on cloud architecture. My passion lies in exploring and researching cloud technologies to build efficient, secure, and scalable solutions. I am committed to drive innovation and excellence in cloud infrastructure.

Work Experience

DOODLE

Senior Devops Engineer Feb 2026 - Present

Senior Platform Engineer focused on building and modernizing Kubernetes-based platforms with GitOps, AWS, Traefik Gateway API, observability, security policies, and infrastructure automation using Helm, Kustomize, Flux, Prometheus, Grafana, Elastic, Kyverno, Sealed Secrets, Crossplane, and CloudNativePG.

- Modernized Kubernetes ingress architecture by migrating workloads from Emissary/Nginx to Traefik Gateway API.
- Managed GitOps-based deployments using Flux, Helm, and Kustomize.
- Improved observability with Prometheus, Grafana dashboards, alerting, Elastic logging, and service-level metrics.
- Automated cloud infrastructure and Kubernetes resources like Crossplane, Sealed Secrets, CloudNativePG, and reusable platform patterns.
- Strengthened platform security with Kyverno policies, TLS management, IAM integrations, and network policies.
- Developed custom Go-based plugins and platform integrations to extend Kubernetes and Traefik capabilities.

Personal Information

-  piero.rospigliosib@gmail.com
-  +34 608683606
-  <http://www.linkedin.com/in/piero-rospigliosi-beltran-cv>
-  Spanish (Native), English (Professional)

Education

University of Alcalá (Madrid, España)

Master's Degree in Software Engineering for the Web · (2019 - 2020)

Master's Thesis: "Study of Angular 2 and above" with an excellent grade.

University of Alcalá (Madrid, España)

Bachelor's Degree in Information Systems Engineering, Informatics Engineering · (2013 - 2017)

Honors in final project for graduation, in Java Web Application using Spring MVC, Spring Boot, Spring Security and Angular.

Certifications

- Cambridge English: B2 First (FCE) - Cambridge Assessment English.
- Google Cloud Certified - Professional Cloud Architect
- Microsoft Certified - Azure Administrator Associate (AZ-104)
- AWS Certified Solutions Architect - Associate
- Google Cloud Certified - Professional Cloud DevOps Engineer
- Google Cloud Certified - Professional Cloud Security Engineer
- HashiCorp Certified - Terraform Associate (003)

SERVICE CLUB

Senior Platform Engineer Apr 2025 - Feb 2026

As part of ServiceClub's Cloud Platform Team, I have led the design, implementation, and evolution of a full cloud-native ecosystem across AWS and Google Cloud, following CNCF best practices. My work focuses on end-to-end automation, observability, and modernization of the company's multi-cloud infrastructure—building secure, scalable, and cost-efficient Kubernetes-based (EKS & GKE) environments from the ground up.

AWS & Cloud-Native Infrastructure:

- Designed and optimized AWS environments leveraging EKS, EC2, RDS, ALB/NLB, CloudFront, Route53, IAM, S3, and VPC networking.
- Implemented Infrastructure-as-Code with reusable Terraform modules for networking, IAM roles (IRSA), monitoring, and GitOps workflows.
- Reduced infrastructure cost through Karpenter autoscaling, node right-sizing, and workload segregation by environment.

Kubernetes & CNCF Ecosystem:

- Managed a full cloud-native stack built around Argo CD, Traefik, Cert Manager, External Secret Operator, Kyverno, Prometheus, Grafana.
- Designed and deployed Dex-based OAuth authentication (Google Workspace integration) across Grafana, Argo CD, and Keycloak.
- Standardized cluster configurations across AWS (EKS) and GCP (GKE) using Helm, Kustomize, and GitOps pipelines.

Observability & Monitoring:

- Integrated Datadog APM, logs, and custom dashboards for microservices and Kubernetes workloads.
- Deployed OpenTelemetry Collector and Prometheus remote-write pipelines to long-term storage (Mimir, Loki).
- Built internal Grafana dashboards to visualize cost efficiency, scaling, and deployment health.

CI/CD & Automation:

- Built the CI/CD system with GitHub Actions + Argo CD Image Updater, enabling continuous deployments from container registries (ECR/GAR).
- Automated image tagging, Helm releases, and environment-specific configurations.
- Ensured high deployment reliability and reduced manual interventions across pre-production and production clusters.

Security & Compliance:

- Applied least-privilege IAM policies, encrypted workloads with KMS, and enforced TLS & private networking for internal services.
- Centralized secret management via AWS Secrets Manager and Kubernetes sealed secrets.

Cross-Functional Collaboration

- Partnered with backend teams to modernize legacy services for Kubernetes.
- Supported product teams with performance tuning, APM tracing, and load testing improvements.

Senior Cloud Engineer Oct 2023 - Apr 2025

As a Cloud Engineer, I have gained extensive experience in implementing and managing solutions across the three major cloud service providers (GCP, Azure, AWS) and Kubernetes. I have been working remotely from Madrid for a company based in the Netherlands, as part of an international, English-speaking team.

Below are the key areas of expertise:

- **Advanced Network Design and Management:**

- . Designed and implemented cloud networking components — including VPCs, subnets, route tables, firewall rules, and DNS — across GCP, AWS, and Azure, ensuring secure, scalable, and high-performance connectivity.

- **Automation and Infrastructure as Code (IaC):**

- . Extensive hands-on experience using Terraform to provision and manage cloud infrastructure, enabling repeatability, consistency, and reduced deployment times.

- **Container Architecture and Orchestration:**

- . Deep understanding of microservice architecture and containerization. Proficient in Kubernetes and Docker, with practical experience using tools such as Argo CD, Nginx Ingress, Cert Manager, Kyverno, and Kong Gateway.

- **Security and Compliance:**

- . Strong focus on applying security best practices across cloud environments using IAM, policies, and native tools, ensuring compliance and controlled access in multi-cloud setups.

- **Cloud Platforms & Services Expertise:**

- . Deep understanding of both IaaS and PaaS services across GCP, AWS, and Azure — including compute instances, container orchestration (GKE, EKS, AKS), and serverless platforms (Cloud Run, AWS Lambda, Azure Functions) — with broad familiarity across the full range of cloud-native services.

- **Workshop Facilitation and Strategic Design:**

- . Led technical workshops to align business needs with architectural decisions, driving successful cloud adoption strategies.

- **CI/CD and DevOps:**

- . Implemented and maintained CI/CD pipelines using Jenkins, GitLab, and Google Cloud Build, improving deployment frequency and software delivery reliability.

- **Programming & API Development:**

- . Proficient in Java with years of experience building backend systems. Recently developed lightweight tools, APIs, and integrations using Golang to support cloud operations and automation workflows.

iGEO ERP Cloud Platform

Cloud Architect

Jan 2021 - Oct 2023 · 2 yrs 10 mos

Promoted to Cloud Architect to lead the design, implementation, and optimization of enterprise cloud solutions on Google Cloud Platform (GCP), ensuring high availability, scalability, and security across mission-critical applications, while also spearheading the development of Java-based cloud-native applications.

GCP-Focused Responsibilities:

- Designed and implemented scalable and secure network architectures using VPCs, subnets, Cloud NAT, and Cloud DNS.
- Managed IAM policies and service accounts for fine-grained access control across cloud resources.
- Architected solutions using GCP managed services such as Cloud SQL, Cloud Storage, Pub/Sub, and Cloud Functions.
- Created and maintained Infrastructure as Code using Terraform and Ansible, managing entire GCP environments across dev, staging, and production.
- Built and deployed containerized applications to Google Kubernetes Engine (GKE), managing workload orchestration, autoscaling, and rolling updates.
- Monitored system health and performance using Cloud Monitoring, Cloud Logging, and integrated custom alerting policies.
- Led cost optimization strategies using GCP's pricing models, committed use discounts, and resource rightsizing.

Development & Infrastructure Responsibilities:

- Developed full-stack microservices with Java (Spring Boot) and RabbitMQ for high-throughput messaging systems.
- Automated creation of hardened machine images using Packer, with scripts for software provisioning and system tuning.
- Designed and maintained Docker images and custom runtimes to support application isolation and portability.
- Administered infrastructure-level components: Tomcat servers, Nginx reverse proxies, and PostgreSQL databases on Cloud SQL.
- Implemented secure CI/CD pipelines using Google Cloud Build and Jenkins, automating build, test, and deployment workflows.

Cloud Engineer

Feb 2019 - Jan 2021 · 2 yrs

Managed the company's cloud infrastructure on Google Cloud Platform (GCP), focusing on operational reliability and automation.

Key Responsibilities:

- Administered Kubernetes clusters on GKE to deploy and manage containerized applications.
- Automated provisioning and updates of cloud resources using Terraform.
- Monitored and maintained GCP services including VPCs, Cloud SQL, IAM, Load Balancers, and Cloud DNS.
- Implemented CI/CD pipelines with Jenkins to streamline software delivery.
- Ensured security compliance and high availability across multiple environments.

Full Stack Java Developer with Spring and Angular

Jun 2017 - Jun 2021 · 3 yrs 8 mos

Developed full stack web applications using Spring Boot and Angular, delivering secure, scalable, and responsive SPAs.

- Designed robust backend architectures with Spring MVC, Spring Security, Spring AMQP, and advanced session management
- Implemented ORM with Hibernate and Spring Data JPA for efficient data operations
- Applied Dependency Injection for modular, testable components
- Built Angular front-ends with reactive state management, observables, routing, and component-driven architecture

Mercury TFS

Development Engineer/ Java Developer / Web Application

Mar 2016 - May 2017 · 1 yrs 3 mos

Contributed to the development of a secure and modular eBusiness platform for Foreign Trade.
Tech stack: Java, Spring (MVC, Security, Batch, JPA, AOP), Maven, Hibernate (JPQL, JDBC), Oracle, JavaScript, ExtJS.
